[Clinical significance of KIF20A in malignant pleural mesothelioma]. To investigate the clinical significance of kinesin family member 20A (KIF20A) in malignant pleural mesothelioma (MPM) and its predictive value for survival and prognosis. The expression of KIF20A in MPM and corresponding peribronchial mesothelial tissues (PBMT) was detected by immunohistochemistry (IHC) staining. The correlation between its expression and clinicopathological parameters was evaluated. The survival time of 30 patients with MPM was recorded by the Kaplan-Meier method and the prognostic value of KIF20A expression was assessed by log-rank test. The expression of KIF20A in MPM was significantly higher than that in PBMT, and its expression was associated with clinical stage, lymph node metastasis, distant metastasis, recurrence and patient survival. These results suggest that KIF20A may be a potential biomarker for predicting poor prognosis in patients with MPM.

Q: Parse.com round trips when using Facebook API I am receiving a round trip when I try to call the Facebook API when the requester has the "Browser and installed apps" permission in my Facebook app settings. The round trip is so quick that I am not able to see the URL that is redirected to it, so I am not sure what the issue is. Is this an issue with the Facebook API? The request looks like this: The response looks like this: { "id": "1438286610838511", "error": { "message": "An unknown error has occurred.", "type": "OAuthException", "code": 1 } } This is happening when I try to get my personal information from the API, but it does not happen when I try to post to the Facebook API. This is happening when using the Facebook app for iPhone. The same code works on Android. I can post to other Facebook APIs using the same app, so the Facebook API is functioning correctly. The Facebook app is working correctly and I am able to login to Facebook and post to Facebook when the Facebook

Tutorials The Photoshop help file, which I'll be referring to as the help file, comes with a large number of tips, tricks and shortcuts. The help file is divided into two types. "Brushes & Tools" describes the brush or pen tools, and "Pencil Features" describes the special features that can be found in the Pencil tool.

1. Text The "Text" features should be used on a graphics tablet, because using them on your computer's keyboard is pretty tedious.

- Edit → Convert to Unicode (Ctrl+U). This menu is only available for Sans Serif fonts. This option is useful for inserting special characters such as ©, _, and " into your text.
- Edit → Convert to Symbols (Ctrl+Alt+U). This option works the same as before, except that this time the font type is a symbol font.
- The Typewriter font type shows you the first few letters of the text in a typewriter font that you type.

To select a block of text, highlight the text, and then click the Edit → Select text tool (T). The move tool is the easiest to use. Click once on the image and use the arrow keys to move it. The move tool has several "snap" modes. The most useful are:

- "Snap to Grid" snaps the text to a grid square.
- "Snap to Point" snaps the text to a text box symbol, which is useful for aligning paragraphs.
- "Snap to Decimal" snaps the text to a decimal, which is useful for aligning fractions, such as 1/2.

To move or copy a block of text, select the text, click the Edit → Copy (Ctrl+C) tool. Then click the Edit → Paste (Ctrl+V) tool and choose the destination text box. Sometimes copying a block of text is not convenient or practical. To copy the selected text and paste it elsewhere, use the Edit → Paste as New (Ctrl+Shift+V). You can paste it into a Word document for example.

2. Pencil The Pencil tool is not as user-friendly as the brush or pen tools. If you can't figure out how to use it, ask an experienced user. The Pencil tool is similar to a 2D
