tar.gz tftpd32" and copied all files into a folder which is in my C drive. Now, I downloaded "ldtp-Win32-2.7.14-7.tar.gz" from After that, I issued command "tar -xvzf ldtp-Win32-2.7.14-7.tar.gz" and copied all files in the folder ldtp-Win32-2.7.14-7 to my C drive. Now, when I issue the command "ldtp -i ldtp-Win32-2.7.14-7 --debug" it says BUGCHECK: DPC\_STILL\_PENDING (1002) Any idea why this is happening? A: After a long time trying to solve it, I found out that what I did was right, but when I checked a file ldtp.exe on C:\ldtp-Win32-2.7.14-7\ldtp.exe (and on C:\ldtp-Win32-2.7.14-7\config\ldtp.conf), it was pointing to another directory on my hard drive. When I moved the file to ldtp.exe in C:\ldtp-Win32-2.7.14-7\config, the bug was resolved. So I guess I was supposed to open ldtp.conf in an editor and point to the file ldtp.exe on the hard drive. It's very weird, but it was solved. Determination of serum tumor necrosis factor alpha in burn patients with cell-mediated immunity depression. The purpose of this study was to determine whether tumor necrosis factor alpha (TNF-alpha) is elevated in burn patients with cell-mediated immunity depression and to assess the time course of the TNF-alpha response. Eighteen burn patients with the diagnosis of acquired immune deficiency syndrome were studied. Thirteen controls without burn and infection were also studied. Serum TNF-alpha was determined using a human TNF-alpha enzyme-linked immunosorbent assay (ELISA) kit. Serum

---

TNF-alpha levels were significantly increased in burn patients with cell-mediated immunity depression compared to controls (median, 308 pg/mL versus 18 82157476af
